

Appl. No. 10/663,780  
Amendment dated: November 8, 2004  
Reply to OA of: July 7, 2004

**Amendments to the Specification:**

On page 14, please replace the last full paragraph which bridges page 15 with the following amended paragraph.

A plurality of ramparts 50 which protrude on the substrate 10 and have T-shape cross-section is formed on the anti-glare pixel-defining layer 60 and the substrate 10. The ramparts 50 have an overhanging portion projecting in a direction parallel to the substrate 10. The ramparts 50 are in a pattern of parallel strides and cross over the first electrodes 20 perpendicularly. The open portions between ramparts 50 are above the open window areas of anti-glare pixel-defining layer 60. The open window areas of anti-glare pixel-defining layer 60 are the locations of future pixels after subsequent organic electroluminescent media [[30]] and second electrodes [[40]] form.
